Headers And Footers on PDF Imports

When using the import tag to import PDFs into your Windward documents headers and footers from the current section will be added on top of your PDF. This can be useful for including page numbers, dates, or other dynamic content in your final document output.

In some cases this functionality may not be desired. In Windward Designer this functionality can be disabled by unchecking the option "PDF Import Headers" in the options dialogue under the Advanced tab. Headers will no longer be added to PDF imports in any documents you generate using Windward Designer.
